DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

2. Claims 1-16 are rejected under 35 U.S.C. 102(e) as being anticipated by Komori.

Komori discloses a method and apparatus of an image forming apparatus (Fig. 2) comprising a photosensitive medium 2; a laser scanning unit 5; a charging roller 1 for applying a predetermined voltage to the photosensitive medium; a developer roller 6; a transfer roller 8; a high voltage power supply 3; a charging roller resistance detection unit 4 for detecting a resistance value of the charging roller; a transfer roller resistance detection unit 14 for detecting a resistance value of the transfer roller; and a control unit 12 for determining a charging voltage to be applied to the charging roller based on the charging roller resistance value detected by the charging roller resistance detection unit and the transfer roller resistance valued detected by the transfer roller resistance detection unit (Col. 3, line 48).

Komori further discloses a storage unit 13 for storing predetermined charging voltage values corresponding to the transfer roller resistance value and the charging roller resistance value (Col. 5, line 12), wherein the control unit selects a charging

voltages value stored in the storage unit (Col. 5, line 12), a charging roller resistance detector detecting 4 current flowing between the charging roller and the photosensitive medium (Fig. 2) and calculating the charging roller resistance valued based on a value of detected current (Col. 3, lines 58-63) and an A/D converter converting into a digital signal a signal corresponding to the charging roller resistance values (an inherent function of a digital memory unit), a transfer roller resistance detector 14 detecting current flowing between the transfer roller and the photosensitive medium and calculating the transfer roller resistance value based on a value of the detected current (Col. 3, line 61), a fusing unit for fixing the toner image on the recording medium and a toner supply to supply toner to the developing roller (not disclosed, however, these are inherent functions of an image forming apparatus).
